(54) Title: ARTIFICIAL ANTIBODY POLYPEPTIDES

Fibronectin type III

(57) Abstract: The present invention provides a fibronectin type III (Fn3) mole-
cule, wherein the Fn3 contains a stabilizing mutation. The present invention also
provides Fn3 polypeptide monobodies, nucleic acid molecules encoding mono-
bodies, and variegated nucleic acid molecules encoding monobodies, and varie-
gated nucleic acid libraries encoding such monobodies. Also provided are meth-
ods of preparing a Fn3 polypeptide monobody, and kits to perform the methods.

^a Special categories of cited documents :

- 'A' document defining the general state of the art which is not considered to be of particular relevance
- 'E' earlier document but published on or after the international filing date
- 'L' document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- 'O' document referring to an oral disclosure, use, exhibition or other means
- 'P' document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an *inventive* step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *A* document member of the same patent family
